Bangalore, India | Working remotely since 2023 | IST (UTC+5:30), flexible overlap with EU/US hours

Experience

Game Developer (Front-end) Dec. 2023 – Present
Eklavya.Me *Remote*

- Built and shipped **100+ educational web games** played by **thousands of young learners**, covering arithmetic, decimals, primes, number comparison and letter tracing, with **Phaser**, **React**, **TypeScript** and **Vite**
- Standardised every game on a shared game-shell SDK (title screens, timers, pause/mute/reset, level flow) with reusable components, cutting new-game build time from **∼3 days to ∼1 day**
- Led a team of **6 game-development interns**, coordinating tasks and guiding implementation across a fully remote team
- Wrote unit tests with **Vitest**, enforced code quality with **ESLint**, and automated deployments with a **GitHub Actions** CI/CD pipeline

Frontend Developer Intern Aug. 2026 – Present
Thundertribes *Remote*

- Building responsive dashboard interfaces in **React** and **Next.js**, working asynchronously with a distributed team

Projects

Tall Order | *Three.js, WebGL, Rapier (WASM), Vite, glTF, Vi3W, GitHub Actions* Live Demo | GitHub

- Built a 3D physics stacking game from AI-generated models I sketched in Vi3W and turned into textured 3D models (sketch → image → 3D)
- Wrote a glTF asset pipeline that shrinks models **16**× (4.6 MB → 280 KB with meshopt + WebP), removes stray mesh fragments, and builds compound convex-hull colliders from k-means clusters of each mesh

Tablekeep | *Next.js 15, TypeScript, Supabase, PostgreSQL, Realtime, Gemini API, Vitest* Live Demo | GitHub

- Built a real-time D&D campaign companion with shared dice rolls, a live initiative tracker and presence, synced to every player over WebSockets with Supabase Realtime
- Designed a PostgreSQL schema with row level security policies, Server Actions and Route Handlers; verified the policies with integration tests in a GitHub Actions CI pipeline
- Integrated the Google Gemini API to stream AI-generated session recaps from players' notes

E-Commerce Store | *Next.js 15, React, Stripe Checkout, Context API* Live Demo | GitHub

- Built a full stack store whose Next.js API routes load the catalog from the Stripe API and create secure Checkout sessions, with cart state in React Context

Subscription Tracker | *Next.js, React, Firebase Authentication, Cloud Firestore* Live Demo | GitHub

- Built a subscription tracker and spending dashboard with Firebase auth, Firestore CRUD and per-user Security Rules

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Python, HTML, CSS
Frontend: React, Next.js 15 (App Router), Redux Toolkit, Tailwind CSS, Vite, Responsive Design, Figma
Game Dev & 3D: Phaser, Three.js, WebGL, Rapier physics, glTF / GLB pipelines (gltf-transform), AI 3D generation (Vi3W), HTML5 Canvas
Backend & Data: Supabase, PostgreSQL (Row Level Security), Firebase / Firestore, FastAPI, REST APIs, WebSockets, Stripe, Gemini API
Testing & DevOps: Vitest, Jest, React Testing Library, ESLint, GitHub Actions CI/CD, Vercel, GitHub Pages, Git

Education

Dayananda Sagar College of Engineering Bangalore, India
M.Tech, Computer Science & Engineering *2025 – 2027*

Dayananda Sagar University Bangalore, India
B.Tech, Computer Science & Engineering; Diploma in CSE, Oxford Polytechnic (2019 – 2022) *2022 – 2025*
